PRIVATE RAG RETRIEVAL TEST DOCUMENT

Synthetic knowledge base · Version 1.0 · Created for retrieval evaluation

Document ID: RAG-CANARY-7QX-2049
Dataset name: The Marigold Archive
Classification: Fictional test data — not real institutional or personal information

Purpose
This document contains deliberately invented facts, identifiers, relationships, and exact values. These facts are not intended to describe a real person, company, university, or event. Use them to verify that a RAG system retrieves the uploaded document and does not substitute guesses from general knowledge.

Important evaluation rule: If a question asks for information not stated in this document, the correct response is that the document does not provide the answer.

1. The Marigold Archive

The Marigold Archive is a fictional records unit established on 14 February 2041 in the imaginary town of Velmora. Its internal motto is “Preserve the small details.” The archive's first room was called Room Kestrel-9, although the building itself was officially named the North Glass Annex.

The archive was founded by three fictional researchers: Mira Voss, Talen Orik, and Devren Quill. The first catalogue entry was not a book. It was a brass paperweight assigned the identifier MA-0001 and nicknamed Little Comet.

The archive's internal catalogue uses the prefix MA, followed by four digits. The checksum word for catalogue batch 17 is BLUE-ORCHID. This checksum word is a deliberately distinctive retrieval marker.

2. Project Lantern Finch

Project Lantern Finch began on 6 September 2042. Its purpose was to test whether a small team could retrieve a specific record from a mixed collection of handwritten notes, typed reports, and audio transcripts.

The project coordinator was Nera Solvik. The project had exactly 7 stages, and the final stage was named “Quiet Index.” The team met every Thursday at 16:20 in a room called Cedar-12.

The project's approved storage cabinet was cabinet 4B, but the key was kept in a sealed envelope labelled TANGERINE-58. The envelope was stored in drawer 3, not drawer 5.

The final report was approved on 19 January 2043 by reviewer Olan Meret. The report's internal reference was LF-FINAL-8831.

3. Unusual Equipment Register

The equipment register contains the following fictional records:

Asset ID	Equipment name	Assigned location	Calibration day
EQ-071	Whisper Meter	Cedar-12	Tuesday
EQ-114	Copper Finch	Room Kestrel-9	Friday
EQ-208	Blue Dial Reader	North Glass Annex	Monday
EQ-319	Pocket Orrery	Archive Vault B	Wednesday

The Pocket Orrery (EQ-319) was temporarily moved to Archive Vault B on 11 April 2043. It was returned on 13 April 2043. It was never assigned to Cedar-12.

4. The Velmora Field Trial

A fictional field trial was conducted in Velmora from 2 May 2044 through 5 May 2044. The trial had 23 participants. The team recorded 186 observations, of which 172 were marked valid and 14 were marked incomplete.

The highest observation count was recorded on 4 May 2044, with 51 observations. The lowest count was recorded on 2 May 2044, with 38 observations. The trial's weather notebook used the phrase “silver drizzle” for the morning conditions on 3 May.

The field trial lead was Iven Rusk. The data clerk was Pella Noy. The trial's final checksum was 6F-ALMOND-22.

5. The Blue Envelope Incident

On 8 August 2044, a blue envelope was found beneath the third shelf of Room Kestrel-9. The envelope contained two blank cards and one handwritten note. The note read: “Count the windows, not the doors.”

The incident was logged by archivist Sera Pell at 09:42. The envelope was assigned incident number BE-2044-08. It was transferred to the archive's sealed-items box at 11:05 on the same day.

The sealed-items box was labelled BOX-ORBIT-6. The box was stored in Cabinet C, upper compartment. No person was accused of causing the incident.

6. People and Responsibilities

Name	Role	Distinctive responsibility
Mira Voss	Co-founder	Created the first catalogue card
Talen Orik	Co-founder	Designed the MA identifier format
Devren Quill	Co-founder	Named the North Glass Annex
Nera Solvik	Project coordinator	Led Project Lantern Finch
Olan Meret	Reviewer	Approved LF-FINAL-8831
Sera Pell	Archivist	Logged the Blue Envelope Incident
Iven Rusk	Field trial lead	Led the Velmora Field Trial
Pella Noy	Data clerk	Recorded the field trial observations

7. Exact Facts for Retrieval Checks

The following facts are intentionally precise. A correct RAG answer should preserve the exact value, spelling, and relationship.

• **Archive founding date:** 14 February 2041.

• **First catalogue item:** Brass paperweight, MA-0001, nicknamed Little Comet.

• **Batch 17 checksum:** BLUE-ORCHID.

• **Project Lantern Finch meeting:** Thursday at 16:20, Cedar-12.

• **Lantern Finch cabinet:** Cabinet 4B.

• **Envelope label:** TANGERINE-58; drawer 3.

• **Final report reference:** LF-FINAL-8831.

• **Pocket Orrery asset ID:** EQ-319.

• **Velmora trial participants:** 23.

• **Valid observations:** 172; incomplete observations: 14.

• **Blue Envelope incident time:** 09:42.

• **Sealed-items box:** BOX-ORBIT-6, Cabinet C, upper compartment.

8. Questions to Ask Your RAG System

1. What is the checksum word for catalogue batch 17?

2. Who coordinated Project Lantern Finch?

3. At what time and on which day did Project Lantern Finch meet?

4. Which drawer contained the envelope labelled TANGERINE-58?

5. What was the reference number of the final Lantern Finch report?

6. Where was the Pocket Orrery assigned, and when was it returned?

7. How many valid and incomplete observations were recorded in the Velmora trial?

8. Who logged the Blue Envelope Incident, and at what time?

9. Where was BOX-ORBIT-6 stored?

10. What was the nickname of catalogue item MA-0001?

11. Who designed the MA identifier format?

12. What was the highest observation count and on which date was it recorded?

9. Negative Retrieval Tests

These questions cannot be answered from this document. Your RAG system should say that the document does not contain the requested information instead of inventing an answer.

• What is the real-world street address of the Marigold Archive?

• What was Nera Solvik's phone number?

• Which university funded Project Lantern Finch?

• What was the password to Cabinet 4B?

• What happened to the archive after 2050?

10. Evaluation Guidance

Pass condition: The system returns the exact facts for the questions in Section 8 and does not confuse similar identifiers, names, dates, or locations.

Negative-test pass condition: The system clearly states that the answer is not available in the retrieved document for the questions in Section 9.

Useful debugging: If a question fails, inspect the extracted PDF text, chunk boundaries, embedding generation, retrieved chunk IDs, similarity scores, and final prompt context. Confirm that the relevant chunk is actually passed to the LLM.

Suggested metadata: document_id=RAG-CANARY-7QX-2049, document_name=Private Retrieval Test Document, dataset=Marigold Archive, version=1.0.

End of synthetic test document.
